🔍 What's a Modded APK?

A **modded APK** is a modified version of the original game file. In this case, the modded Geometry Dash APK gives players additional perks that are not part of the official version—such as unlocked content or free access—beyond what's available on standard app

stores. These versions are typically shared outside official channels. While they can offer fun new features, always be cautious and consider device security when installing files from third-party sites.geometrydashvn.org
